

# Air Monitoring

## What We Do

We have experience providing air monitoring services across a multitude of industries Australia-wide, including manufacturing, construction, mining, maritime, education and government.

## Compliance

- ✓ All our occupational hygienists follow the ARECC decision-making framework when considering what hazards may exist and who may be exposed to them within various workplaces.
- ✓ We only use Australian Standard, AIOH, and NIOSH methods and techniques to provide all air monitoring services.
- ✓ We are an approved provider of dust monitoring and dust management services suitable to meet the QGL02 Management of respirable dust in Queensland mineral mines and quarries guideline.

- ✓ We also only use National Association of Testing Authorities (NATA) accredited laboratories for the sample analysis.
- ✓ We fully customize large scale exposure monitoring programs or one-off assessments that are appropriate to your situation to ensure efficient and effective use of both time and money.

## Our Occupational Hygienists can

- ✓ Conduct personal monitoring to assess your employees' individual or Similar Exposure Groups (SEGs) exposure.
- ✓ Conduct static (fixed) monitoring at strategic locations to assess how well control measures are working or determine specific locations that may require additional control.
- ✓ Conduct real time (process specific) measurements to determine how specific processes or movements within the workplace contribute to worker exposure.

### Speak to an Expert

**Australasian Safety Services can address all these pressing needs when it comes to your Health & Safety Consulting and Management within your Workplace.**

## Our Process

---

- ✓ Our occupational hygienists will arrive on site and setup all the equipment, ready to run.
- ✓ Every worker monitored is provided with a feedback diary asway for each worker to record the tasks that they undertook throughout the monitoring period.
- ✓ At the completion of the monitoring period, the equipment is collected as well as a debrief with each worker about the monitoring period.
- ✓ While it may be virtually impossible to monitor all possible scenarios as each workplace is highly variable, we do have tools that can help extrapolate the likelihood that workers may or may not be excessively exposed into the future.

## Our Process

---

- ✓ All our reports are written in accordance with the AIOH “Guidelines for Writing Occupational Hygiene Reports 3rd Edition”. Despite the formal requirements for Occupational Hygiene reporting, we aim to write our reports in a manner that is easy to understand.
- ✓ Our Executive Summary helps explain very quickly, what was assessed, what the results were and what needs to be done. The remainder of the report contains a more in-depth view at the Who, What, Where, When, Why and How.
